

Product Highlights

- Full featured backup solution
- Bandwidth limitation
- Data deduplication
- Advanced compression methods
- Encrypted transfers and storage to and from the datacenter
- USB initial backup support
- Broad software host support
- Flexible data restore, from any location

YachtCloud ShoreSafe backs up all your data like emails, documents, databases and any other important data to the YachtCloud secured datacenter in the Netherlands.

One of the main features of ShoreSafe is its bandwidth optimisation, the following methods have been implemented to conserve your precious bandwidth:

- highly efficient compression methods
- up and download bandwidth limitation
- data deduplication, only transferring adjusted or new data

As an additional service ShoreSafe optionally performs the first backup on removable media (e.g. an USB drive). This USB drive is then shipped to the YachtCloud main office, where the data will be uploaded to the datacenters backup environment. All data on this USB drive is encrypted, and is thus secured during transport. This service is unique to online backup services, and overcomes the problem of the usually large initial backup that needs to take place.

ShoreSafe offers support for the following software products:

- Microsoft Windows XP and onwards
- Mac OSX Snow Leopard and onwards
- Microsoft Windows Server 2003 and onwards
- Microsoft Exchange 2003 and onwards
- Microsoft SQL 2005 and onwards
- Microsoft SharePoint 2007 and onwards
- Oracle Database 11g
- VMware vSphere 4.0 and onwards (live snapshots)

ShoreSafe uses the following security and encryption standards:

- SSL
- AES
- RSA
