- Optional synchronisation of *who is onboard* to YachtCloud datacenter
- Full log of who signed in and out over time
- Export to PDF

YachtCloud CrewBoard is a digital presence list, that displays who is onboard in a graphically appealing interface.

CrewBoard can run on any device that has a modern web-browser, and is not limited to an amount of devices. Multiple locations can be outfitted with a touch-panel for signing in and out.

There are 2 methods of signing in and out on CrewBoard:

- Swiping in and out manually on a touch panel, which can be conveniently placed near any exit.
- Integrating CrewBoard with a security system allows automatic sign in / out when people swipe their security card or tag.

In case of emergency the touch panel device has a special button, which will download the current list of persons that are on/off board. The touch-panel can then be taken and used for security matters.

The emergency function can also be triggered from an interfaced security system.

Additional to the manual security features, there are 2 optional automated methods of sending out the actual list of persons onboard:

- CrewBoard can be synchronised with the YachtCloud datacenter, on which a read-only version of the product can be viewed.
- An automated email can be sent to a pre-configured email address every time someone signs in or out.

Info pages provide in easy accessible, location specific, and fully customizable contact details (telephone, email) from local authorities, doctor and hospitals to restaurants and other facilities.

All persons that are listed onscreen can be edited via the user-friendly web-based management interface from where the following items can be managed:

- Groups in which persons can be added
- Persons
  - Photo
  - Name
  - Telephone number
  - FunctionBadge ID
